Hi J'aime,

In the CULTColor.swift file,

The CULTNavigationBarColor is defined as (red: 1, green: 243.0/255.0, blue: 46.0/255.0, alpha: 1.0)…

…but the comment indicates //Hex: #FFEA2E

This might be a typo in the Green level. Is it supposed to be 234 or 243? The Hex# in the comment does not match up.

Also, in…

● DateTimeViewController…the textColor is a standard yellow color.

● SACalendarConstants.h….the headerTextColor is a standard yellow color. This affects several headers throughout the app design.

- Image.xassets…Even though it seemed to me that a few of the other images were very slightly different yellows, "profile_pic_bg" stood out in particular to me as being different.

Also, check the yellows in:

- SideMenuViewController.xib —> Blue BG

- SettingsView.xib

- Events.storyboard —> Video Broadcast View Controller
